IoT-enabled emergency information
supply chain architecture for elderly
people: The Australian context

Nathan Phennel

Tech Lead, Product Owner, Web Dev, formerly SDET
Sydney, New South Wales, Australia

Summary

After years of tinkering with code as a hobby, I took my first job as a
software tester at Quantium and never looked back.

While testing, I collaborated with devs, product management,
designers, clients and many other stakeholders to improve our
product and processes. I improved confidence with each release by
introducing and leveraging test automation.

In 2020, I became a software developer at Temenos. Since then, I've
also taken on the role of:
- Lead Developer
- Product Owner
- Team Manager

I manage the team which consists of two full-time product developers
and we maintain a product focused on user-behaviour analytics.

Overall, my knack for learning new things has helped me to continue
leveling up my code and take on new roles. Moreover, I keep a
positive attitude and remain mindful so that I'm easily approachable
for my team and senior management.

Experience

Temenos
5 years

Senior Software Developer Team Lead
January 2020 - Present (3 years)
Manly, New South Wales, Australia
